BULLETIN NO.: 2006-020	DATE: November 1, 2006	PAGE: 1 of 1
TITLE: Dry Cell Battery Disposal	RELEASE: Dealer/Customer	
SECTION: General	MODEL: All ZV-2	

GENERAL:

The purpose of this document is to provide information on recycling of batteries that are found in the Machine Control Units (MCU) for all ZV-2 models.

DETAIL:

When an MCU has failed completely and is to be disposed of, it is important to pull out the battery in the MCU and dispose of it properly. Failure to do so will permit contaminants to leach into the ground and contaminate water sources.

The following battery recycling website links may be used to find a local recycler in your area or to find storage methods until batteries may be disposed of properly.

Click on the links below for further information.

<http://www.batteryrecycling.com/>

To dispose of the battery, use a pair of channel lock pliers and firmly grip the battery then pull, breaking the battery away from the RTV and weldments at the ends of the battery. Then dispose of correctly.

MCU is shown opened for battery removal below.
